

Know What Works and Make It Better

NextHealth Technologies is a healthcare analytics solution that transforms data, allowing health plans to drive effective behavior change and measure results in real-time, all through a secure AI-powered, cloud-based analytics platform.

The pressure on health plans to deliver medical cost reductions and improved outcomes for their members is increasingly critical. But without the ability to maximize and automate data intelligence, it's difficult to measure program effectiveness. NextHealth Technologies intuitive and automated solution enables you to identify and target the most impactable populations and gain measurable insights in real-time.

Reduce medical and administrative costs

By automating manual analytics efforts, NextHealth drastically reduces the cost of administrative and medical resources. Turning former month-long measurement processes into real-time, actionable insights in minutes. NextHealth's innovative platform has saved clients millions of dollars across dozens of use cases.

Make better decisions faster

Measure respective initiative effectiveness in 60 days. Launch a new initiative assessment within 90 days. NextHealth's AI-powered platform allows you to view real-time insights the moment your initiative is activated on the platform. And with one centralized location for all your data, you can continuously optimize initiatives, without waiting months or years.

Scale your analytics capabilities

Automatically generate and analyze predictive analytics. Reveal key drivers and insights across your organization to inform targeted campaign designs and other strategic outreach initiatives, in a standard, consistent and scalable way.

LEADING HEALTH PLAN EXECUTIVES:

“With NextHealth, we’ve been able to rapidly optimize the effectiveness of cost, quality, and service enhancement initiatives resulting in significantly reduced costs and improved outcomes. It’s truly a differentiating capability.”

How It Works

At NextHealth Technologies, we amplify your existing analytics solution and utilize statistical, machine learning to identify key opportunities and highlight program effectiveness.

Enrich your data

Onboard multiple data sources, including third-party data, into a predictive, centralized view across members, providers, and customers.

Measure

Using integrated program setup and scientifically rigorous analytics methodologies, measure the effectiveness of any cost, quality, or service enhancement initiatives in minutes vs. months or years.

Target the right people

Predictive analytics uncover members that can most impact the targeted use case. The platform pinpoints avoidable and impactable behavior vs. just finding the highest risk patients. Focus resources on fewer total members while concurrently driving better (and bigger) outcomes.

Optimize findings

Optimize programs and interventions automatically based on what works. Adaptive learning delivered by the platform automatically assigns members to the interventions that are most likely to change their behavior or achieve the desired outcome.

Recognition

Named for the third year in a row in three **Gartner Hype Cycle** reports: Hype Cycle for U.S. Healthcare Payers, 2018; Hype Cycle for Healthcare Providers, 2018; and Hype Cycle for Consumer Engagement With Health and Wellness, 2018.

Named in seven Frost & Sullivan **reports including: Global Healthcare Data Analytics 2017 and Artificial Intelligence and Advanced Analytics in Healthcare 2017.**
